ULTIMATE DURABILITY

Maxx Ultimate receives substantial upgrades in key areas of performance: suspension, chassis, and driveline. Tough 6061-T6 aluminium chassis and suspension parts deliver bombproof strength with show-stopping looks. Steel CV driveshafts and Mod-1 steel gears offer maximum torque handling and durability.

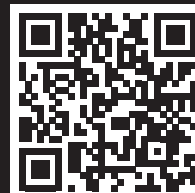

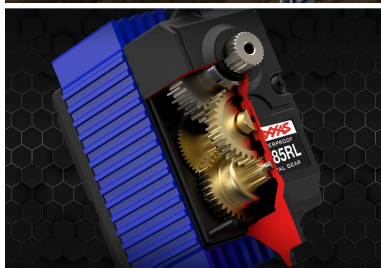

INCLUDED WIRELESS MODULE

A Traxxas Link Wireless Module comes pre-installed in Maxx Ultimate's TQi transmitter to take full advantage of the on-board telemetry. The free Traxxas Link app allows you to make micro-adjustments to the transmitter and view real-time telemetry data like speed, RPM, and battery voltage on your mobile device.

MAXIMUM STEERING AUTHORITY

With a staggering 650 ounce-inches of torque and full steel gears, the High Torque Maxx Servo gives Maxx Ultimate complete steering authority, even with its huge Sledgehammer tyres. The case features an anodised aluminium centre section with cooling fins and ball bearings for increased precision.

- 60+ MPH with optional gearing and single 4s LiPo battery (sold separately)
- Traxxas stability management
- TQi 2.4 GHz high output radio system
- Traxxas Link wireless module
- Clipless body mount system
